

Clinical Reference Guide: How to Cure & Treat Skin Diseases

Medical RAG Knowledge Base - Verified Clinical Protocols & Curative Therapies

1. Melanoma (MEL) - How to Cure:

- Wide Local Excision: Curative surgical removal with 1-2cm margins for localized lesions.
- Immunotherapy: Pembrolizumab, Nivolumab, or BRAF inhibitors (Dabrafenib).

2. Basal Cell Carcinoma (BCC) - How to Cure:

- Mohs Micrographic Surgery: Highest cure rate (>99%) for facial or recurrent BCC.
- Standard Surgical Excision: 4mm safety margins for non-facial lesions.
- Topical Chemotherapy: 5-Fluorouracil (5-FU) or Imiquimod cream for superficial BCC.

3. Actinic Keratosis (AKIEC) - How to Cure:

- Cryotherapy: Liquid nitrogen freezing destroys pre-cancerous dysplastic cells.
- Photodynamic Therapy (PDT) & 5-FU Cream: Complete field clearance of sun damage.

4. Benign Keratosis & Moles - How to Cure/Remove:

- Cryosurgery, electrocautery, or shave excision for cosmetic/symptomatic removal.

5. Vascular Lesions (VASC) - How to Cure:

- Pulsed Dye Laser (PDL) and IPL light therapy selectively eliminate capillary growths.
